The proper arrangement draughts for the ventilation of sleeping rooms has perplexed all. One thing, however, is certain. It has been proved by actual experiment that a layer of air lies against the walls which is subject to very little movement, even when there is a strong circulation in the middle of the room. It is therefore important that a bed should not be placed close to the wall. If kept there during the daytime, it should be moved at least several inches out into the room at night. Alcoves and curtains should be avoided. The Complete Failure of Negro Suf-

There has elapsed more than quarter of a century during which efforts have been made to solve the the line of enforced political equality between the races, and all these efforts, without exception, stand forth confessed failures. The problem yet remains unsolved. To the question, "Why?" I would answer that in attempting its solution the legislators seem to have lost sight of the great fact, shining forth from every page of modern history, that "where the Anglo-Saxon sets his foot there he rules." Into the reason for this there is no necessity to inquire. It is enough that the fact exists. Nor does the relative numerical strength of the races in any locality seem to have aught to do with it. Cast away upon an island inhabited by savages, a rude, unlettered American or British sailor, and if the natives do India, from the moment the Saxon's foot pressed the soil, his domination begins. It is only with due regard is capable of solution. While the Federal power has been engaged of the National Legislature, the people most directly affected have been steadily engaged in nullifying
